

Approved Handler Knowledge Training

**Do you think you need it?
Chemsafety can help...**

Chemsafety's Approved Handler courses address the specific requirements of your substances. We have been providing Approved Handler training since 2006, and have two Test Certifiers on staff.

Chemsafety's open courses include attendees from a variety of industries – users of similar substances are grouped together. Training is held in our new seminar room with catered lunches, or at your premises.

Chemsafety's presenters are chemistry graduates (but we won't bamboozle you with jargon) with many years experience assessing chemical storage and handling across a broad range of New Zealand workplaces.

What about other personnel?

Those not requiring Approved Handler training will still benefit from our "general chemical safety and awareness" courses. Don't forget training is required under the Health & Safety in Employment Act.

Chemsafety offers Approved Handler training that covers the substances that you use:

- Not all hazardous substances require Approved Handlers
- You may be able to manage quantities below the threshold

Call 0800 377 370 to discuss your situation with one of Chemsafety's HSNO specialists.

Secure your place today:

Workshops tailored to your organisation...

If you have identified issues at your workplace, and you need to bring your staff up to speed with your procedures, Chemsafety tailors courses to include photos and procedures specific to your sites.

Other training topics include:

- Safety data sheets
- Exempt laboratory
- HSNO for managers
- Asbestos awareness
- Workplace air quality
- Noise

Call us on 0800 366 370 to discuss how we can help you.
