

## Asbestos Bulk Sample Testing

When you have materials that may contain asbestos, it is recommended that you have a sample analysed to positively confirm whether or not asbestos is present. You cannot tell by visual inspection if a product does not contain asbestos.

Chemsafety can come to your site to inspect and collect samples for analysis, or you can drop a sample in to us. Results are usually available the next working day. If asbestos is present in the sample, we can provide you with guidance on what to do next.

### Sample Collection Guidelines

For non-friable asbestos products such as cement boards, vinyl flooring, or domestic textured or stipple plaster ceilings. If you are unsure whether to collect a sample yourself, please call us on 0800 366 370.

- Wear a well-fitting dust mask
- Wet the product down with water
- Do not use any power tools
- Cut or break off a piece approximately 5cm in diameter, ensure the sample is representative of the whole thickness of the material.
- Place material into a sealed plastic bag or container
- Clearly identify the type of material and where it is from
- Complete the details on the sample details form (next page)
- Deliver to Chemsafety, 2B 303 Blenheim Road, Christchurch

We will phone results to you, and then email our report.
