This table shows the default thresholds for **Location Test Certification (LTC)**, **Approved Handlers (AH)** and whether a particular classification requires **Tracking**. It is important to note that individual substances may have been varied so that the thresholds have changed or been removed. **Be sure to check the requirements for the specific substance of interest** (or call Chemsafety). You will also need to determine the threshold quantity ratio if you have substances in similar classes (e.g. all flammable liquids).

† Requirements for Tracking for Class 6.1C, and for Tracking & Approved Handlers for Class 9 substances have been changed for many substances, particularly Group Standards. Check the specifics for your substances.
